

Welcome to SAHRA Scenario Development!

Last Updated Wednesday, 01 November 2006

Welcome to the scenario development web community!

While there are a lot of resources on the web and in print media about scenario development, very few of those resources are specific to the unique problems of developing scenarios for natural resources and environmental modeling.

Scenario planning allows us to imagine all possible futures that can occur; including extreme events and the range of possibilities between them. Scenarios require us to think with an open mind with respect to what may happen, since we want to consider all plausible futures and not just the most likely one.

With this web site, we hope to address three main issues: Educating scenario developers and modelers about the scenario development process. Sharing and exchanging information and resources about scenarios with other scenario developers by fostering a multidisciplinary community of scenario developers. Developing a framework for scenario development; we hope to move the community forward to a unified set of scenario development terminology and guidelines.

Please take a few minutes to look around! cartoon adapted from <http://www.thewritingloft.com/thinking%20man.jpg>
